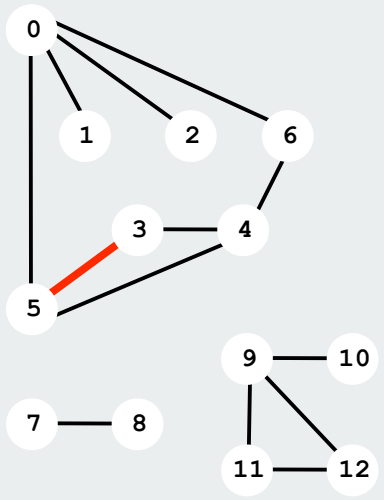
Graph Traversal

M. Elif Karslıgil

Graph Traversal

Maintain a two-dimensional V × V boolean array.

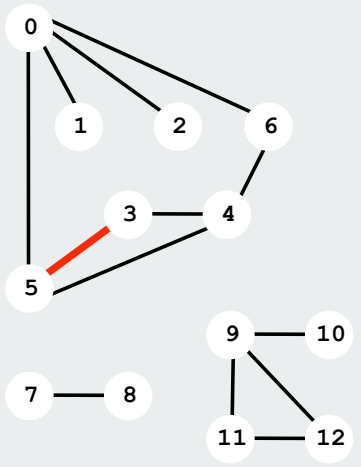
For each edge `v-w` in graph: `adj[v][w] = adj[w][v] = true.`

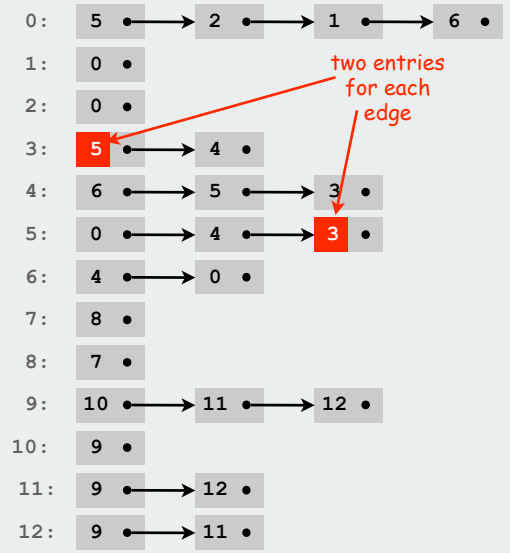


two entries for each edge

	0	1	2	3	4	5	6	7	8	9	10	11	12
0	0	1	1	0	0	1	1	0	0	0	0	0	0
1	1	0	0	0	0	0	0	0	0	0	0	0	0
2	1	0	0	0	0	0	0	0	0	0	0	0	0
3	0	0	0	0	1	1	0	0	0	0	0	0	0
4	0	0	0	1	0	1	1	0	0	0	0	0	0
5	1	0	0	1	1	0	0	0	0	0	0	0	0
6	1	0	0	0	1	0	0	0	0	0	0	0	0
7	0	0	0	0	0	0	0	0	1	0	0	0	0
8	0	0	0	0	0	0	0	1	0	0	0	0	0
9	0	0	0	0	0	0	0	0	0	0	1	1	1
10	0	0	0	0	0	0	0	0	0	1	0	0	0
11	0	0	0	0	0	0	0	0	0	1	0	0	1
12	0	0	0	0	0	0	0	0	0	1	0	1	0

Maintain vertex-indexed array of lists (implementation omitted)





Graph Traversal

- Visit every edge and node in the graph in a systematic way
  - Depth-first search. Put unvisited vertices on a stack.
  - Breadth-first search. Put unvisited vertices on a queue.

Trémaux Maze Exploration

- Unroll a ball of string behind you.
- Mark each visited intersection by turning on a light.
- Mark each visited passage by opening a do

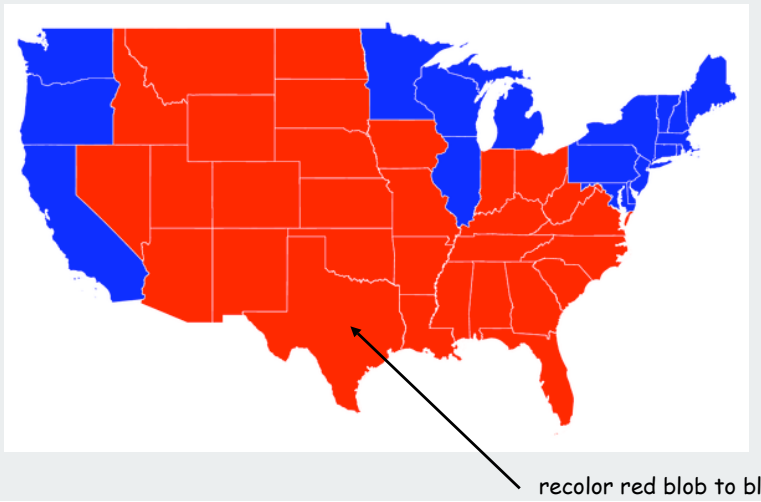
First use? Theseus entered labyrinth to kill the monstrous Minotaur;
Ariadne held ball of string.

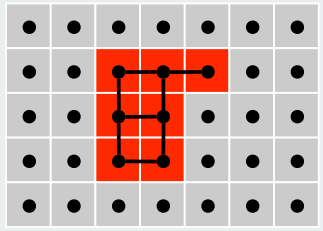
Flood Fill

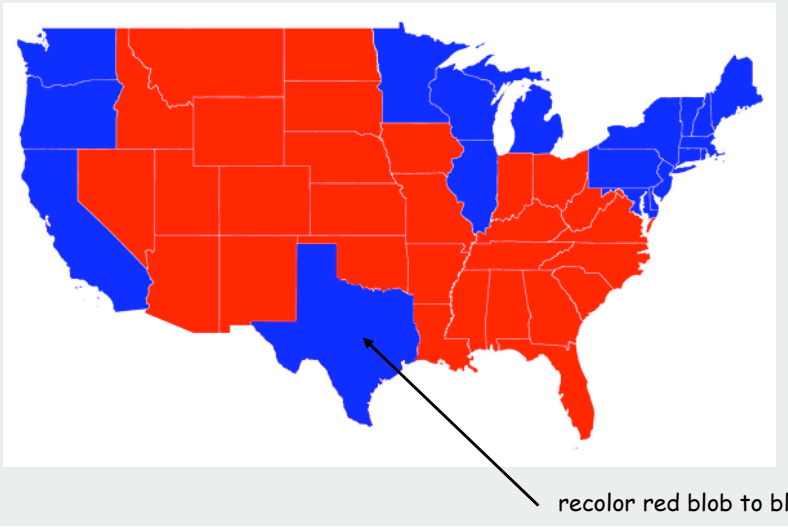
Change color of entire blob of neighboring red pixels to blue.

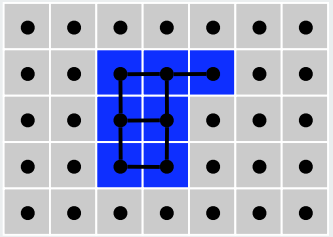
Build a grid graph

- vertex: pixel.
- edge: between two adjacent lime pixels.
- blob: all pixels connected to given pixel.



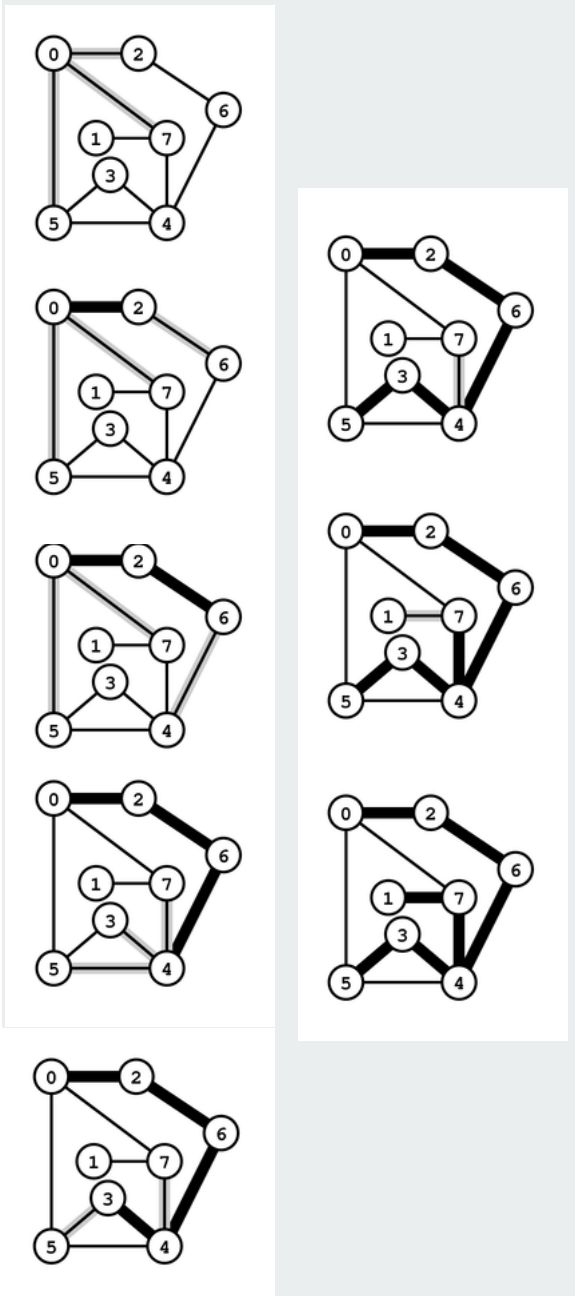






Graph Traversal – Depth First Seach (DFS)

- Goal. Systematically search through a graph.
- Idea. Mimic maze exploration.
- Typical applications.
  - find all vertices connected to a given **s**
  - find a path from **s** to **t**



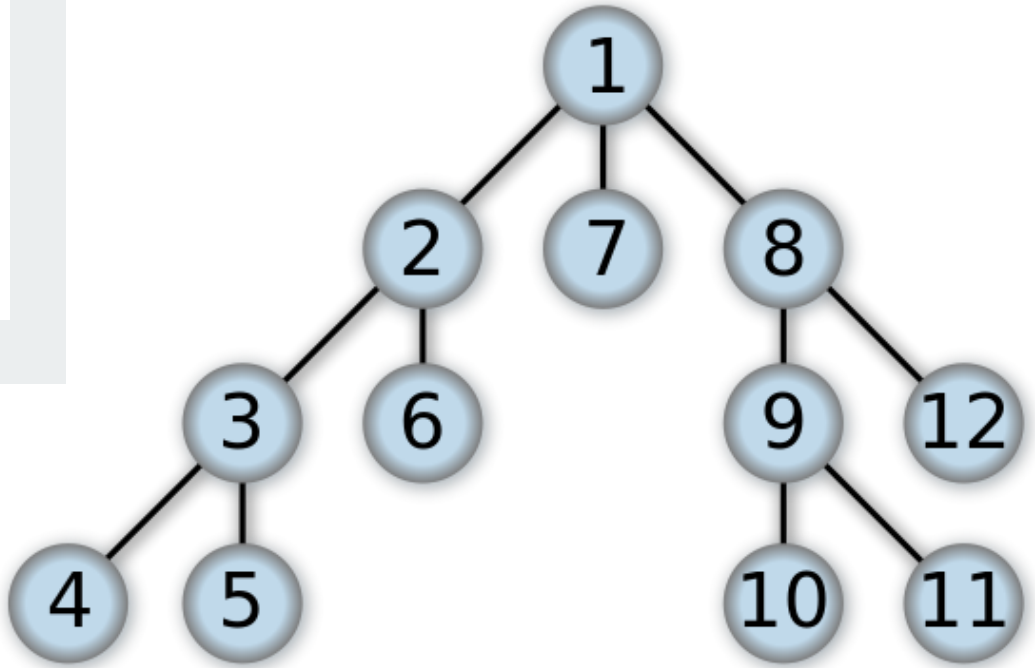
Graph Traversal – Depth First Seach (DFS)

DFS (to visit a vertex **s**)

Mark **s** as visited.

Visit all unmarked vertices **v** adjacent to **s**.

recursive



DFS Traversal Example

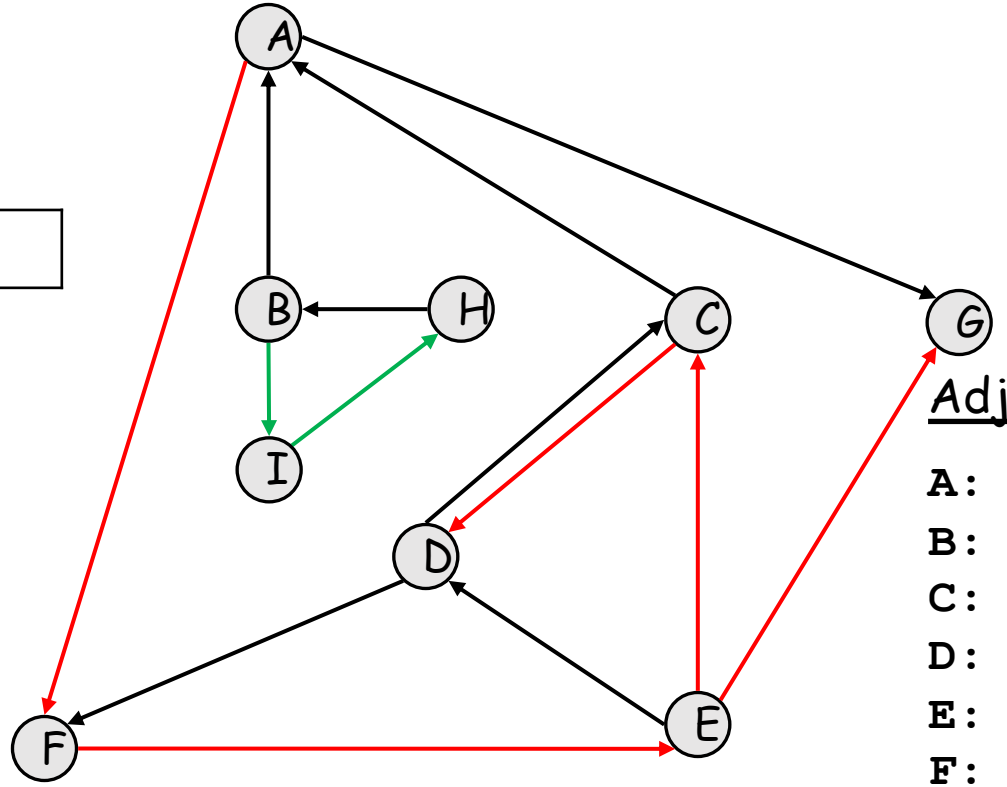
visited :

A	B	C	D	E	F	G	H	I
1	1	1	1	1	1	1	1	1

How many connected components does the graph have ?
Starting Point is A

A F
F E
E C
C D
D ---
--
E G
G –
--
A F E C D G

B I
I H
H --



DFS (to visit a vertex s)

Mark s as visited.

Visit all unmarked vertices v adjacent to s.

recursive

Adjacency Lists

A: F G
B: A I
C: A D
D: C F
E: C D G
F: E
G:
H: B
I: H

DFS Traversal Example

visited :

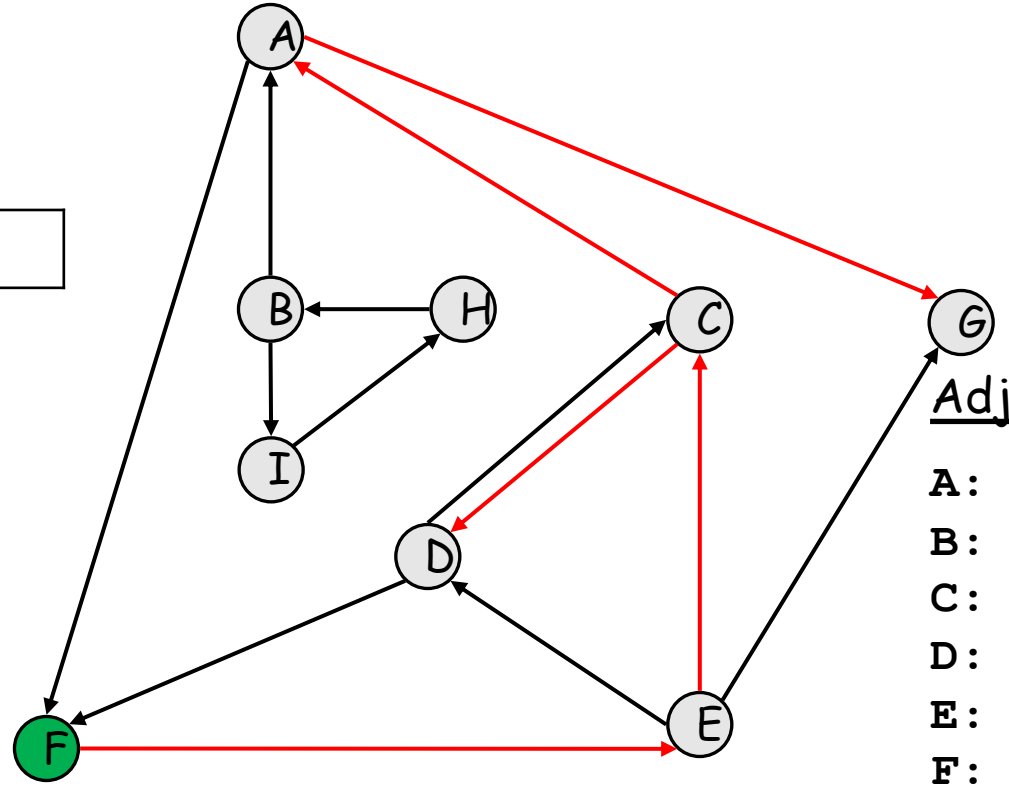
A	B	C	D	E	F	G	H	I
1	0	1	1	1	1	1	0	0

Is there any path from F to I

F E
E C
C A
A G
G –

D
--

---- 9



Adjacency Lists

A: F G
B: A I
C: A D
D: C F
E: C D G
F: E
G:
H: B
I: H

DFS (to visit a vertex s)

Mark s as visited.

Visit all unmarked vertices v adjacent to s.

recursive

Depth First Seach (DFS)

- To visit a node v:
  - mark it as visited
  - recursively visit all unmarked nodes w adjacent to v
- To traverse a Graph G:
  - initialize all nodes as unmarked
  - visit each unmarked node
- Running time.
  - O(E) since each edge examined at most twice
  - usually less than V to find paths in real graphs

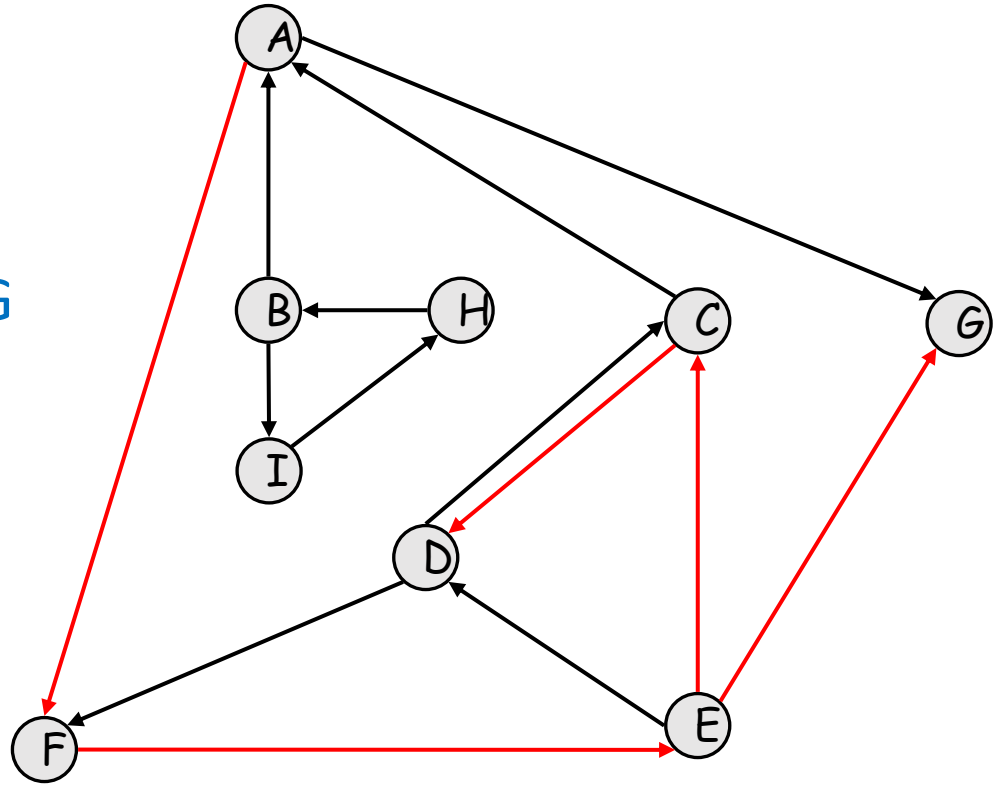
Graph Traversal – Depth First Seach (DFS)

- Recursive DFS:

```
DFS(G, s)
{
    mark s as visited
    for all neighbors w of s in Graph G
        if w is not visited
            DFS(G,w)
}
```

Is there a path from A to D ?
A F E C D

Is there a path from A to B ?
A F E C D G



Adjacency Lists

```
A:   F G
B:   A I
C:   A D
D:   C F
E:   C D G
F:   E
G:
H:   B
I:   H
```

Graph Traversal – Depth First Seach (DFS)

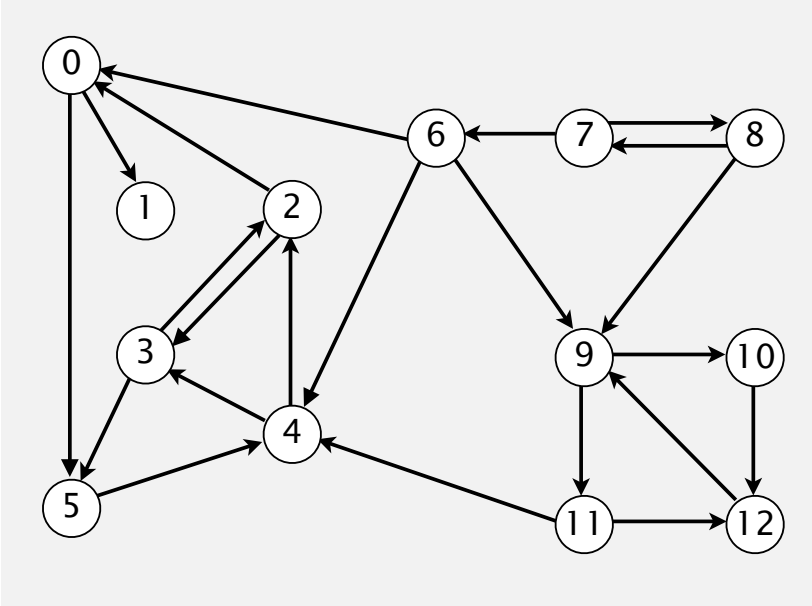
- Non-Recursive DFS: using STACK

```
DFS(G, s)
{
        Stack.push(s)
        mark s as visited
        while(Stack is not empty)
        {
                v = Stack.pop();
                for all neighbors w of v in Graph G
                        if w is not visited
                        {
                                STACK.push(w)
                                mark w as visited
                        }
        }
}
```

DFS Traversal Example

Adjacency Lists

- 0 : 1 5
- 1 : -
- 2 : 0 3
- 3 : 2 5
- 4: 2 3
- 5 : 4
- 6 : 0 4 9
- 7 : 6 8
- 8 : 7 9
- 9 : 10 11.
- 10 : 12
- 11 : 4 12
- 12 : 9



Is there a path from node 0 to node 9

DFS Traversal from node 0 : 0 1 5 4 2 3

Graph Traversal – Breadth First Search (BFS)

BFS (from source vertex **s**)

Put **s** onto a FIFO queue.

Repeat until the queue is empty:

- remove the least recently added vertex **v**
- add each of **v**'s unvisited neighbors to the queue, and mark them as visited.

Visited :

A	B	C	D	E	F	G	H	I	J.	K	L
1	1	1	1	1	1	1	1	1	1	1	1

Queue : A

B C D

C D E F

D E F

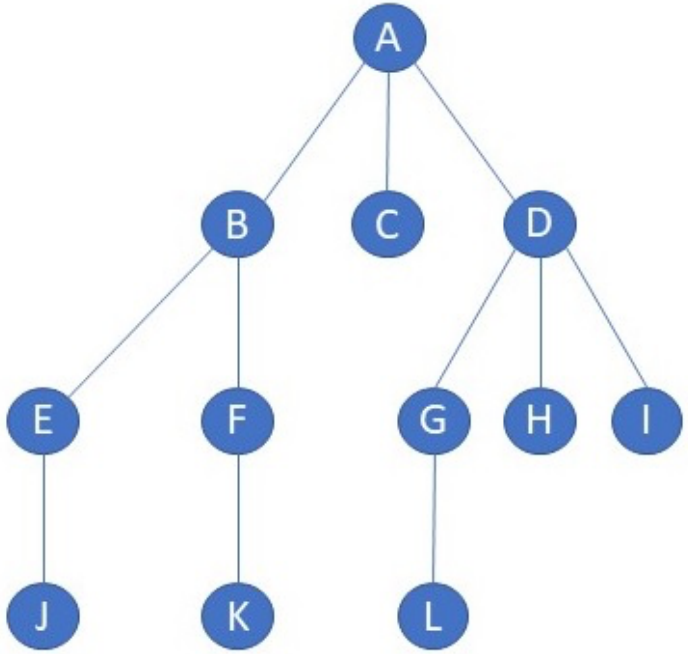
E F G H I

F G H I J

G H I J K

H I J K L

A B C D E F G H I J K L



Breadth First Search (BFS)

Graph Traversal – Breadth First Search (BFS)

BFS (from source vertex **s**)

Put **s** onto a FIFO queue.

Repeat until the queue is empty:

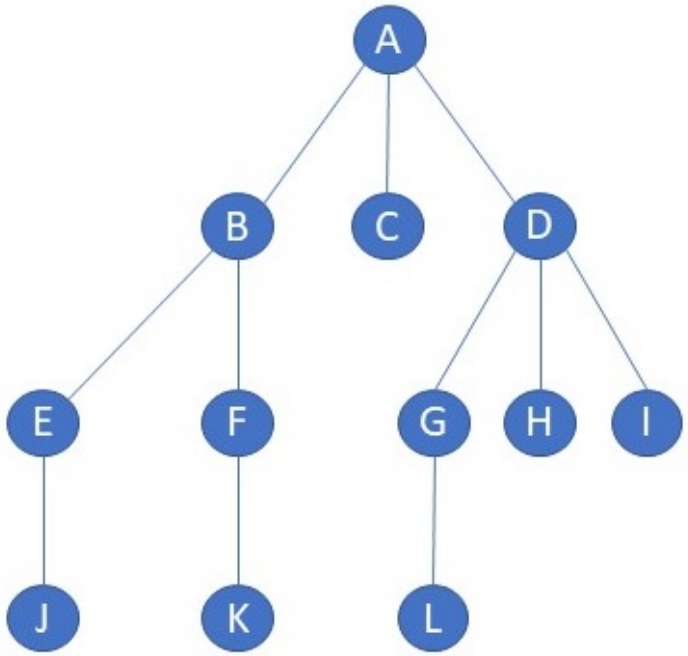
- remove the least recently added vertex **v**
- add each of **v**'s unvisited neighbors to the queue, and mark them as visited.

Visited :

A	B	C	D	E	F	G	H	I	J.	K	L
1	1	1	1	1	1	1	1	1	1	0	0

Path :

A	B	C	D	E	F	G	H	I	J.	K	L
0	1	1	1	2	2	2	2	2	3	3	0



Breadth First Search (BFS)

Shortest Path from A to K

Queue : A B C D E F G H I J **K**

BFS Traversal Example

visited :

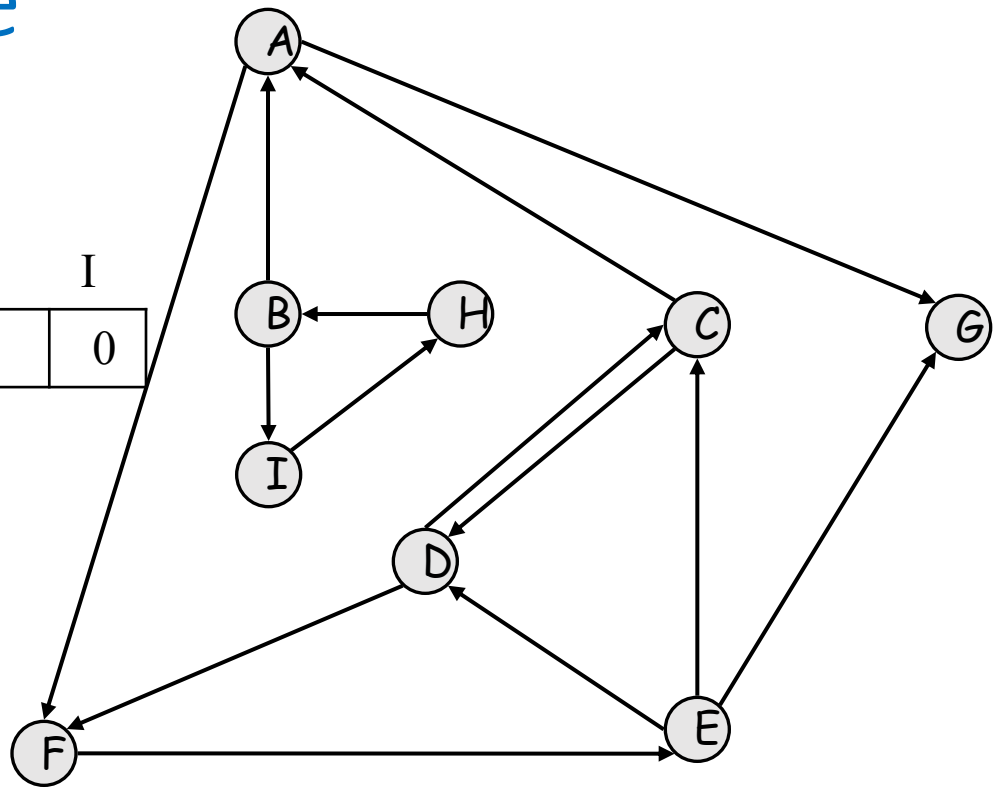
A	B	C	D	E	F	G	H	I
1	0	1	1	1	1	1	0	0

BFS Traversal :

A F G E C D

BFS (from source vertex s)

Put s onto a FIFO queue.
Repeat until the queue is empty:
- remove the least recently added vertex v
- add each of v's unvisited neighbors to the queue, and mark them as visited.



Adjacency Lists

D:   C F
E:   C D G
F:   E
G:
H:   B
I:   H
```

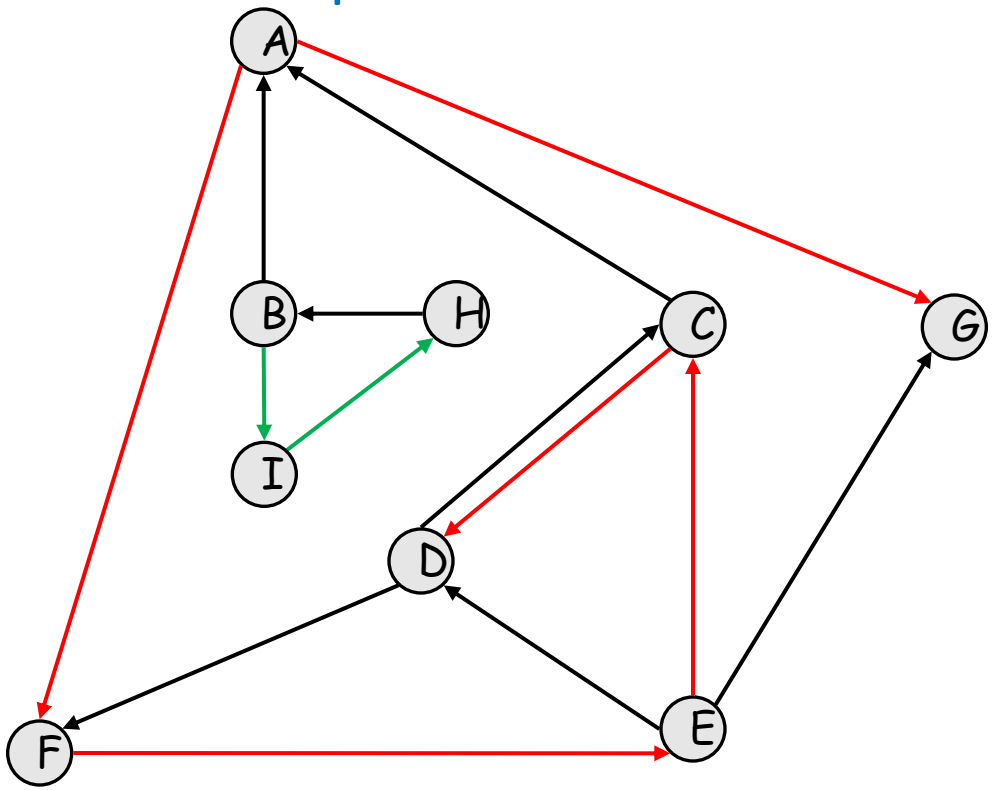
A F G E C D B I H

Graph Traversal – Breadth First Search (BFS)

- BFS : using QUEUE

```
BFS(G, s)
{
        Queue.enqueue(s)
        mark s as visited
        while(Queue is not empty)
        {
                v =  Queue.dequeue();
                for all neighbors w of v in Graph G
                        if w is not visited
                        {
                                Queue.enque(w)
                                mark w as visited
                        }
        }
}
```

Traversal Example



Adjacency Lists

```
A:   F G

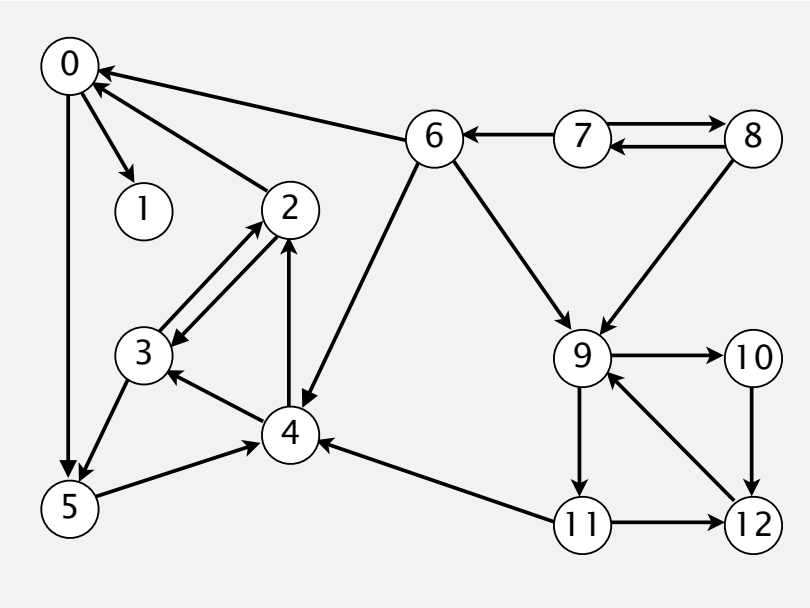
- 12 : 9



DFS : **6** 0 1 5 4 2 3 9 10 12 11

BFS : **6 0 4 9 1 5 2 3 10 11 12**

Graph Search Problems

- Is there a path from s to t?
- Find shortest path (fewest edges) from s to t
- Is there a cycle in the graph ?
- How many connected compenents exist?
